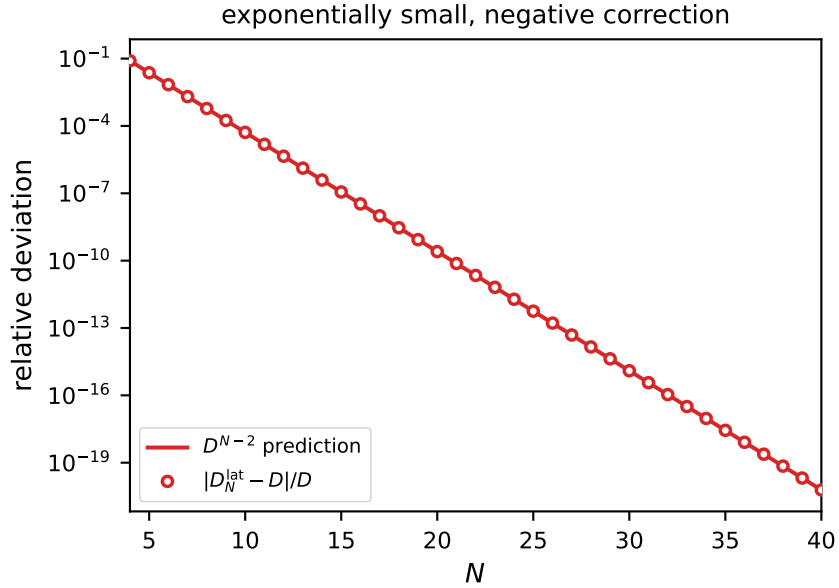
Einstein coefficient at $\omega_0 = 1.3$
$D = 0.294508$
closed form $D(1-D^{N-2})/(1-D^N)$
lattice sum $\frac{2}{N}\sum_j \frac{\sin^2(2\pi j/N)}{v_{N,j}}$
D_N^{lat}
N



exponentially small, negative correction
relative deviation
D^{N-2} prediction
$|D_N^{\mathrm{lat}} - D|/D$
N
